Scan

Ports

TCP Ports

Select the TCP ports you want scanned. A "Full" setting may increase scan time and is not recommended for Class C or larger networks.

☐ None

☐ Full

☒ Standard Scan (about 1,900 ports) [View list](#)

☐ Light Scan (about 160 ports) [View list](#)

☐ Additional (up to 12,500 ports)

(ex: 1-1024, 8080)

☐ Perform 3-way Handshake

UDP Ports

Select the UDP ports you want scanned.

Notice that Vulnerability Detection is set to "Complete". You will now add the QIDs which are to be excluded from a scan. Click the checkbox next to [Excluded QIDs](#)

☐ Custom [Configure...](#)

Vulnerability Detection

☒ Complete

☐ Custom

☐ Select at runtime

Include

☒ Basic host information checks [View list](#)

☐ OVAL checks

Exclude

☐ Excluded QIDs

Intrusive Checks

☐ Do not exclude Intrusive checks

Authentication

Authentication enables the scanner to log into hosts at scan time to extend detection capabilities. See the online help to learn how to configure this option.

☐ Windows

☐ Unix/Cisco/Network SSH

☐ Attempt least privilege for Unix (skip root delegation in Unix record)

☐ Oracle

☐ Oracle Listener

☐ SNMP

☐ VMware

Click [Add Lists](#)

☐ Custom [Configure...](#)

Vulnerability Detection

- ☒ Complete
☐ Custom
☐ Select at runtime

Include

- ☒ Basic host information checks [View list](#)
☐ OVAL checks

Exclude

- ☒ Excluded QIDs

Exclude the QIDs from the selected lists.

<input type="checkbox"/> Info	Title	Add Lists

Intrusive Checks

☐ Do not exclude Intrusive checks

Authentication

Authentication enables the scanner to log into hosts at scan time to extend detection capabilities. See the online help to learn how to configure this option.

☐ Windows

☐ Unix/Cisco/Network SSH

☐ Attempt least privilege for Unix (skip root delegation in Unix record)

☐ Oracle

☐ Oracle Listener

☐ SNMP

☐ VMware

☐ DB2

☐ HTTP

Click [Save](#)

The [Dissolvable Agent](#) has been accepted for your subscription. You can now select it for this profile, and select the Windows Share Enumeration feature (requires the Agent).

- ☐ Enable the Dissolvable Agent
- ☐ Enable Windows Share Enumeration

Lite OS Scan

When this option is selected and QID 45017 is included in the scan, the scan job reduces OS detection testing of targets during host discovery phase before vulnerability testing. Several expensive OS detection methods are excluded (i.e. telnet, msrpc, ntp, and more).

- ☐ Enable lite OS detection

Add a Custom HTTP Header value

Set a custom value in order to drop defenses (such as logging, IPs, etc) when authorized scans are being run.

Host-Alive Testing

When enabled, scan testing will report hosts found alive during the discovery or port scanning process. Other testing will not occur.

- ☐ Enable Host Alive Testing

Do not overwrite OS

When enabled, we will not update the OS of target hosts during scan processing.

- ☐ Do not overwrite OS

In this lab you created a Search List which included all the QIDs detectable by the Cloud Agent. You then excluded this Search List from a scan Option Profile. That's it. You're done. You may now close this browser tab.
