

In this lab, you will add scannable host assets as IP-tracked assets. The tracking method impacts how the hosts will be listed in your scan reports. In the VMDR application, click on the [Assets](#) section.

Click the Address Management tab

Add

You have successfully added **IP tracked** host assets. Other options are to track assets by DNS name, or by NetBIOS name, although using IP tracked is the best practice. Next, click on the Quick Actions drop-down arrow next to the internal IP addresses
