In this tutorial, you'll add the training lab hosts to an Asset Group called San Jose, which represents their location. To get started click the "Asset Groups" tab.
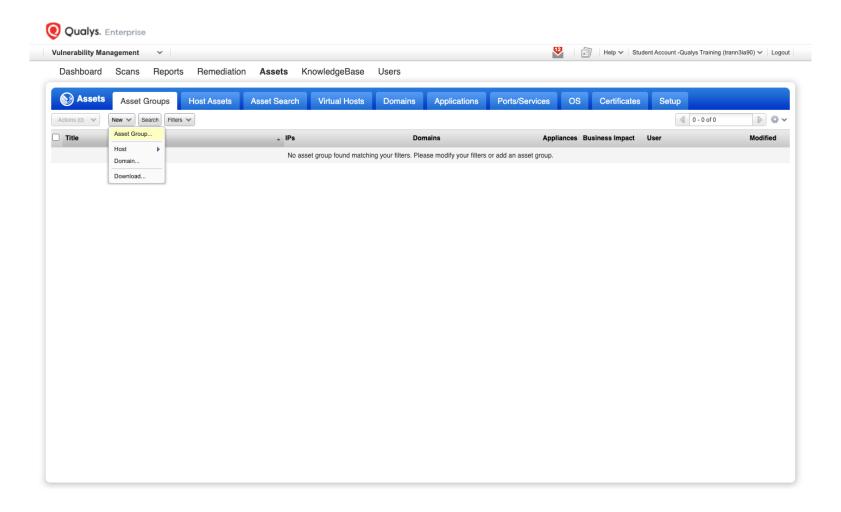

Under the "Asset Groups" tab, click the "New" button.

Select Asset Group...
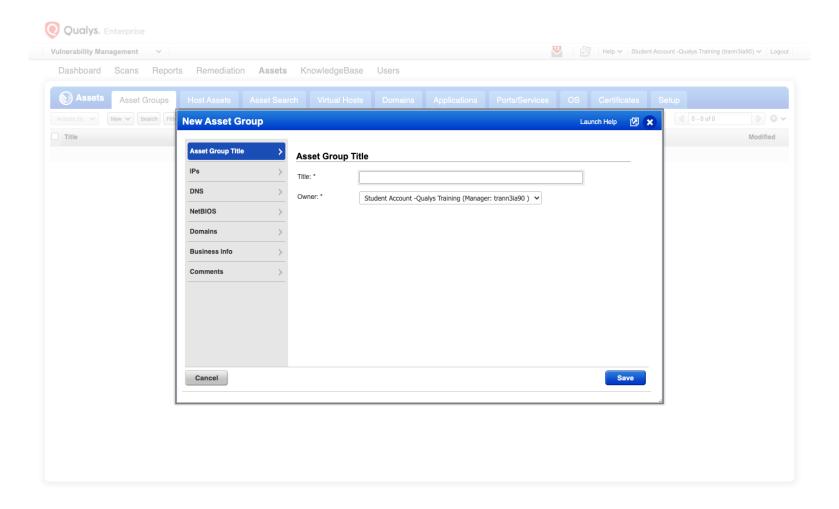

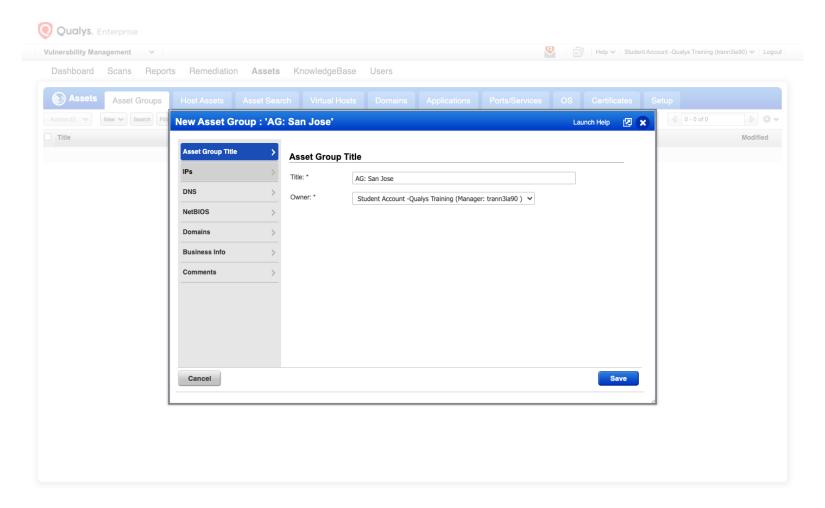

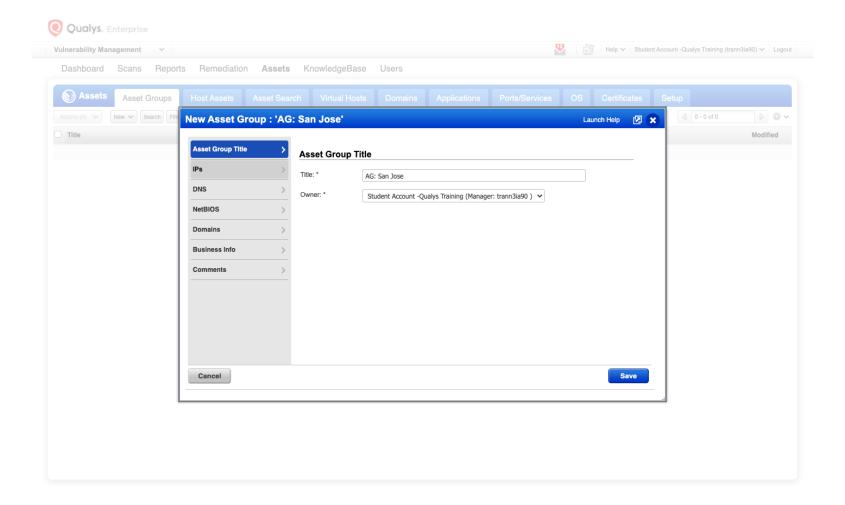

We'll give this Asset Group an appropriate title.

The "AG:" prefix in the title, will help to distinguish the matching Asset Tag created for each Asset Group you add to your account. A good Asset Group title will accurately represent its host members.
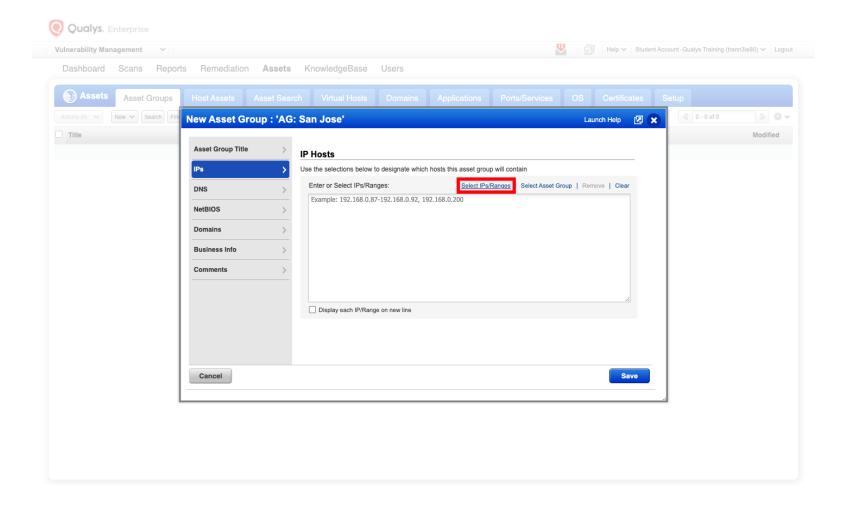

In the navigation pane (on the left) click IPs.

Click the "Select IPs/Ranges" link.
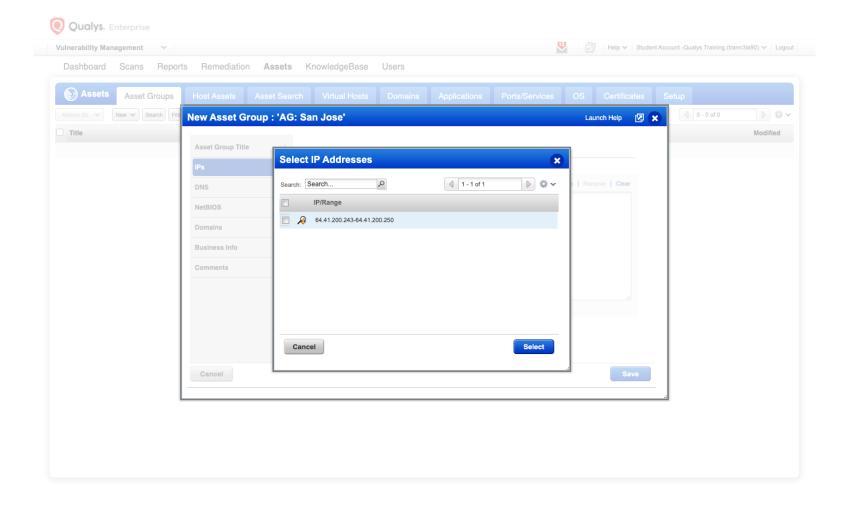

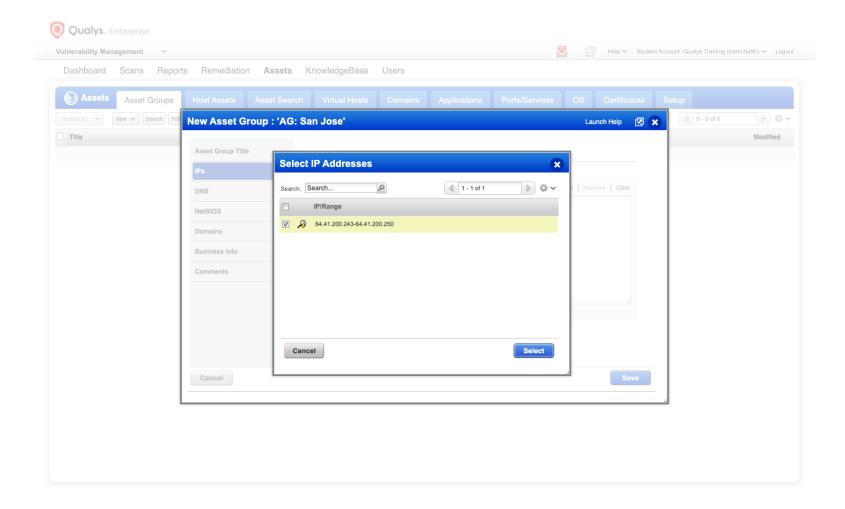

Select the check box for the Training Lab IP addresses: 64.41.200.243 - 64.41.200.250

Click the "Select" button.
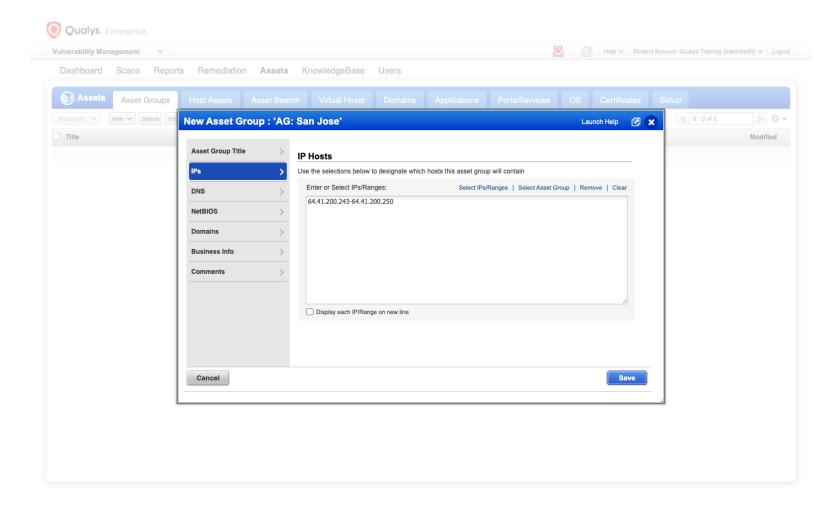

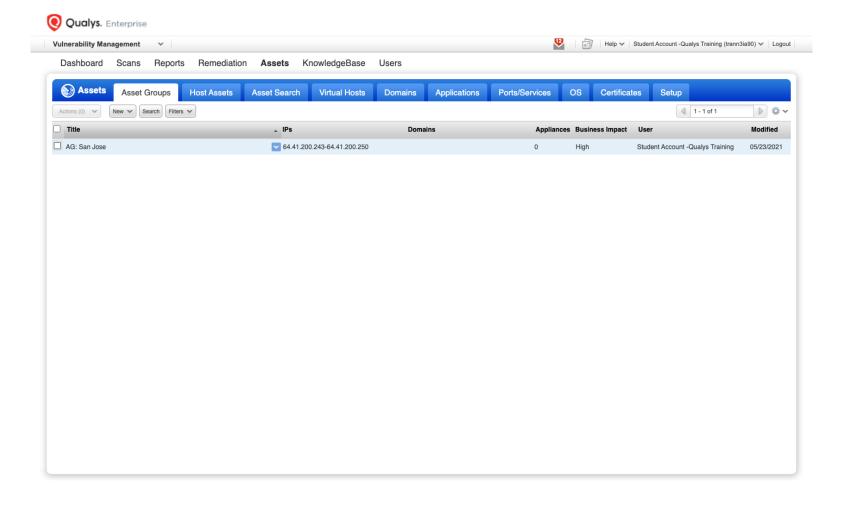

With the Training Lab IP addresses added, click the "Save" button in the lower-right corner.

You have successfully added the Training Lab IP addresses to the San Jose Asset Group. You may close this window and return to the Lab Tutorial Supplement.
